

DNA - SWAB TEST

Miniature American Shepherd

Samples and identification

- The breeder that import the semen or use a foreign dog, need to order the swab-sample (Performagne PG-100) from the Norwegian Miniature Shepherd Club, and send it to the owner of the male dog. This swab must be used by the veterinarian when DNA-testing the dog in question
- The swab-sample (Performagne PG-100 only) must be labeled with the dogs ID-number, and this form needs to be marked with the swab-number that you find on the swab-sample.
- The swab-sample and this form must be shipped directly from the veterinary clinic to the veterinary faculty (NMBU. Norway) to avoid mix-up of sample/labeling.

<ul style="list-style-type: none"> • Used for breeding with dam living in Norway. Litter No.: _____ • Dam's name and registration no.: _____ • Semen-donator from (country): _____ 	

Owner declaration

I hereby declare that the correct dog (with the given breed and ID-number) is presented for swab sampling. I accept that uncorrect information will prohibit that the litter will be registered in the Norwegian Kennel Club (or deleted from records), and that the Norwegian Kennel Club have no responsibility for this. The samples may be used for research to improve health in the breed and all information concerning dog and owner is kept strictly confidential.
